

- Introduction to Monte Carlo for Matrix Models [1]
- Large- $N$  limit of two-dimensional Yang–Mills theory with four supercharges [2]
- Tensor renormalization group study of the three-dimensional  $O(2)$  model [3]
- Three-dimensional super-Yang–Mills theory on the lattice and dual black branes [4]
- Positive Geometries for all Scalar Theories from Twisted Intersection Theory [5]
- Critical analysis of two-dimensional classical XY model [6]
- Finite  $N$  unitary matrix model [7]
- Thermal phase structure of a supersymmetric matrix model [8]
- Tensor renormalization group study of the non-Abelian Higgs model in two dimensions [9]
- Lattice quantum gravity with scalar fields [10]
- The properties of  $D1$ -branes from lattice super Yang–Mills theory using gauge/gravity duality [11]
- Removal of the trace mode in lattice  $N = 4$  super Yang–Mills theory [12]
- Truncation of lattice  $N = 4$  super Yang–Mills [13]
- Nonperturbative study of dynamical SUSY breaking in  $\mathcal{N}=(2,2)$  Yang–Mills theory [14]
- Testing the holographic principle using lattice simulations [15]
- Testing holography using lattice super-Yang–Mills theory on a 2-torus [16]
